DETAILED SPECIFICATIONS

1. **PROJECT MISSION.** Design a set of construction plans to implement stormwater improvements in the North Clearwater Beach area. The City of Clearwater is committed to ensuring that we have a sustainable city through green measures focusing on our economy, environment, and community and is looking for vendors who share that dedication and will help the City meet that goal.

2. **BACKGROUND & SITE DESCRIPTION:** North Beach is a neighborhood under the umbrella of the "Clearwater Beach Association" located on the northern portion of Clearwater Beach Island Land. Uses include single family residential, vacation rentals, condominium, and private club properties. The site is topographically divided into 12 separate drainage basins. The southern portion of the site is bounded by the Gulf of Mexico to the west, and the Mandalay Channel waterbody to the east, while the northern terminus of the developed land is bounded by Dunedin Pass to the east, Bird Key to the north and the Gulf of Mexico to the west. Local roadways for the residents and visitors to the area are generally configured in a north-south and east-west grid configuration.

The combination of low-lying topography limited available soil storage, aging infrastructure, high tidal surges and seasonal high intensity storm events makes the North Clearwater Beach area susceptible to severe flooding that can result in disruption to emergency response operations as well as damage to public and private property. This project aims to increase the level of service to allow for improved emergency response conditions, as well as to reduce the impacts of flooding. Previously conducted work is included in the Exhibits for informational purposes. Exhibit D contains the Master Plan of North Beach while Exhibit E contains the Concept Plans Technical Memorandum and Plans. It should be noted that although this prior work is being provided, the city is open to other potential solutions (i.e., inverted crowns, box culverts, check valves with access vaults, underground storage, elevating roadways, curbing throughout, etc.), so please don't assume city wants to move forward with all recommendations within either document. Also, the City is in the process of researching and developing policy to improve its tidal flood barriers. Exhibit F includes a Draft Technical Memorandum summarizing existing practices and other available data from other governmental jurisdictions throughout the State of Florida. Exhibit F should be considered for informational purposes only as it relates to the scope of this solicitation.

3. **SCOPE OF SERVICES.** The City of Clearwater intends to engage an engineering team to prepare construction plans for the next generation of stormwater infrastructure for the North Beach area. Although this project is primarily related to flood mitigation, the team should also have capabilities in potable water distribution, wastewater collection, and reclaimed water distribution. The City would like the successful team to analyze the existing right of way and propose technical concepts for roadway grading and inlet placement. The city is expecting a single design package that includes several construction phases to minimize disruption to residents during construction. The city is looking for an innovative and cost-effective design, and considerations for sustainable long-term operational and maintenance impacts. Various services and activities may include, but are not limited to:
 - Grant research, writing and management
 - Public outreach and engagement
 - Engineering Services:
 - Stormwater system modeling and design
 - Stormwater pump stations
 - Potable water distribution
 - Wastewater collection
 - Reclaimed water distribution
 - Tidally influenced outfall system design
